The Antler Chair

finnish birch pine plywood
scale 1:9 miniature

Thank you very much for supporting the SketchChair project! We hope you enjoy your SketchChair Miniature, specially designed for the Kickstarter Campaign and one of the first designs in the SketchChair library. SketchChair and the design library will soon be publicly released, and this design will be freely available under a creative commons licence, for anyone to use and modify.

SketchChair has been made possible thanks to your contribution and support! Thank you for helping to bring this open-source design tool to life!

*Sincerely,
Greg and Tiago,
Diatom Studio.*

Assembly Instructions

1) Carefully remove parts.

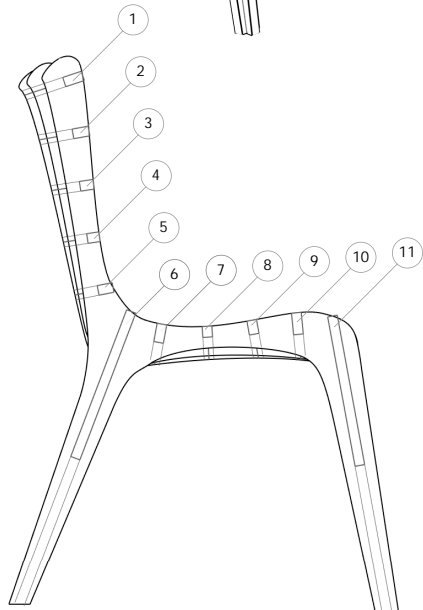

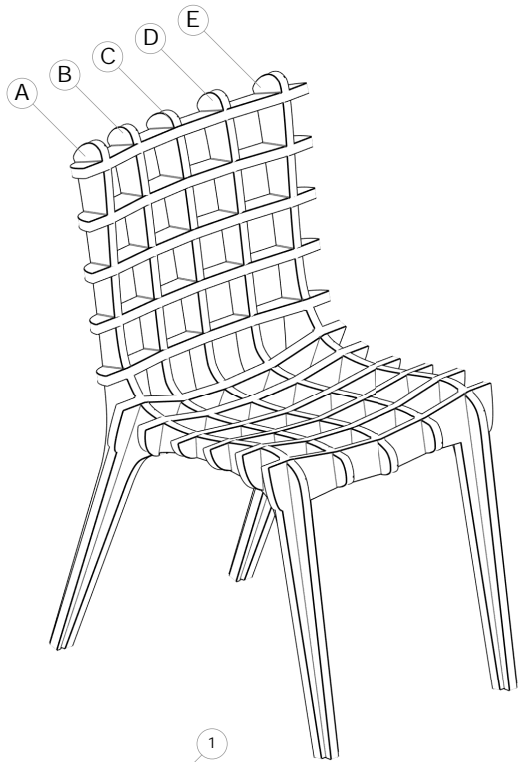

We recommend using a craft knife to cut the small tabs holding the parts in place. This can also be done by carefully pushing the parts out of the sheet.

2) Clean part edges.

Some of the edges might have residue on them as a result of the lasercutting process. You may want to wipe these down with a dry cotton cloth before assembling the parts.

3) Assemble.

The parts should hold together without any glue. A simple press-fit by hand will be enough to complete your miniature!
